

The 10 Essentials – Should be brought on EVERY outdoor outing

1. Map
2. Compass
3. Extra clothing (men's, women's, kids')
4. Extra food and water
5. First-aid kit
6. Headlamp or flashlight (with extra batteries)
7. Matches (storm proof, or in a watertight container)
8. Fire starter
9. Knife (or multi-use camp tool)
10. Whistle

Some other items that might be useful:

1. Sunglasses
2. Sunscreen
3. Water filter (or other method of water treatment)
4. Space Blanket
5. Unwaxed Dental Floss (works good for lots of things)

Map

A topographic map should accompany you on any trip that involves anything more than an impossible-to-miss footpath or well-populated nature trail. Handout maps, the simplistic kind you pick up at visitor centers or entrance stations, do not show the kind of topographic details necessary for route finding. If you stray off the trail, or need to locate a water source, such one-dimensional maps are just about useless. In such situations, a topographic map is essential.

Compass

It's easy to get disoriented in the backcountry. A compass, combined with map-reading skills, can help you stay on course.

Extra Clothing

Conditions can abruptly turn wet, windy or frigid in the backcountry. It's important to carry an additional layer (or two) of clothing in your pack. If you're lost, extra clothing may get you through the night. A wool or fleece cap weighs little and is a fine heat-retainer on cold nights. Extra socks are a true blessing if your original pair becomes soaked. Depending on the conditions, consider carrying a fleece jacket or pile sweater, a waterproof shell or even a compressible parka. Cotton items, which become useless when wet, make poor backup items. Another idea: Pack an ultralight space blanket for emergencies.

Extra Food and Water

Always pack at least one extra day's worth of food. It can be as simple as a freeze-dried meal, but it's even smarter to include no-cook items: extra energy bars, nuts, dried fruits and jerky. The process of digesting food helps keep your body warm, so on a cold night it's smart to munch some food before bunking down—but never leave animal-attracting leftovers in your tent.

First-Aid Kit

Pre-assembled first-aid kits take the guesswork out of building a kit on your own, although most people "personalize" such kits to suit individual needs. Any kit should include moleskin (for blisters), adhesive bandages of various sizes, several gauze pads, adhesive tape, disinfecting ointment, over-the-counter pain medication, pen and paper. Latex gloves also deserve consideration.

Headlamp or Flashlight

A good light source is invaluable in the backcountry. Picture yourself trying to hustle off a mountain in dwindling light, or trying to set up camp as the last bit of blue drains from the sky. It's smart to carry replacement bulbs and batteries, even a backup lamp or flashlight. Headlamps allow you to keep your hands free during any activity and are usually a backpacker's first choice for a light source. Keep your light in an easily accessible section of your pack; check it once in a while to see if it has become inadvertently switched on.

Matches

Matches headed into the backcountry should be the waterproof variety, or they should be stored in a waterproof container. Take plenty and make an extra effort to keep them dry. Convenience-store matchbooks are often too flimsy and poorly constructed to be trusted for wilderness use. Save yourself some frustration and tote reliable matches on every trip. Don't rely only on mechanical lighters, which sometimes fail.

Fire Starter

As the name implies, fire starter is an element that helps you jump-start a fire. The ideal fire starter ignites quickly and sustains heat for more than a few seconds. Possible candidates: dry tinder tucked away in a plastic bag; candles; priming paste; heat "nuggets" are convenient and reliable fire-starting products. Even lint trappings found in a clothes drier can work.

Knife or Multi-Tool

Knives or multi-tools are handy for gear repair, food preparation, first aid, making kindling or other emergency needs. A basic knife should have at least one foldout blade (more likely two), one or two flathead screwdrivers, a can-opener and (though some people will call this a luxury) a pair of foldout scissors. The more complex your needs (if, for example, you are leading an inexperienced group), the more options you may want in your knife or tool.

Whistle

The sound of a whistle travels farther than your voice. Plus, blowing a whistle in an emergency won't exhaust your vocal chords. It's smart to attach a lanyard to your whistle, then tie it to a D-ring or some other portion of a shoulder strap on your pack. Thus if you fall (and perhaps pin one of your arms) you won't have to dig far to get it up to your mouth.

Water Filter/Purifier

Rushing streams and alpine lakes appear to contain the clearest, freshest water on earth. Yet sometimes they harbor microscopic pathogens that, if you ingest them, could leave you feeling nauseous for weeks. You have three defensive strategies: boiling, chemical treatment or straining the water through a mechanical filter or purifier. Filters and purifiers do the job with minimal fuss. Read our in-depth coverage of the topic in our choosing a filter or purifier.

You need to bring one other item—knowledge—in order to benefit from the gear on this list. Just having a compass in your pack or a map in your pocket will be of no value to you unless you understand how to use them. As one veteran search-and-rescue leader put it, "People talk about the 10 Essentials, but the most important essential is between your ears."
